

PSIcontrol – System Engineering Basics (SKUSADM1)

This training is aimed at system administrators. It provides the knowledge required by system administrators to run the system after system commissioning. The objective is to enable close cooperation between the customer and PSI Software AG.

After completing the training, the participants have a general insight into the structure and function of the PSIcontrol system. They are able to perform essential administrative activities, such as starting the application and managing user accounts, as well as providing systems support.

Contents:

- Terminology – modules, server types and functions
- The System Control tool SykoView – structure and operation
- Configuration and communication – communication principles and settings
- Data Models and dynamic Data – structure and administration
- The distributed control system – configuration and redundancy concept
- Start, stop and administer PSIcontrol
- User management – accounts and permissions
- Archive system basics – data backup overview
